About the authors	xi
Acknowledgements	xiii
Prologue	1
Construction Products Directive 89/106/CE	1
Scope of the book	2
Key features of the book	3
Outline of the book	3
Further information	6
Notes and references	6
1 The Structural Eurocodes	7
1.1 The Structural Eurocode programme	7
1.1.1 <i>Links between the Eurocodes</i>	9
1.1.2 <i>Timetable for publication</i>	11
1.2 The wider landscape	11
1.3 Standards organizations	14
1.3.1 <i>International Standardization Organization (ISO)</i>	14
1.3.2 <i>European Committee for Standardization (CEN)</i>	15
1.3.3 <i>National standards bodies (NSBs)</i>	16
1.3.4 <i>Role of Eurocode 7 in UK practice</i>	18
1.4 Summary of key points	21
1.5 Notes and references	21
2 Basis of structural design	25
2.1 Contents of the Eurocode	25
2.2 Requirements	27
2.3 Assumptions	29
2.4 Principles and Application Rules	29
2.5 Principles of limit state design	29
2.6 Design situations	30
2.7 Ultimate limit states	32
2.7.1 <i>Limit state EQU</i>	32
2.7.2 <i>Limit state STR</i>	34
2.7.3 <i>Limit state FAT</i>	35

2.8	Serviceability limit states	35
2.9	Actions, combinations, and effects	36
	2.9.1 <i>Actions</i>	37
	2.9.2 <i>Combinations of actions</i>	39
	2.9.3 <i>Effects of actions</i>	43
2.10	Material properties and resistance	44
	2.10.1 <i>Resistance</i>	44
	2.10.2 <i>Material properties</i>	45
2.11	Geometrical data	49
2.12	Structural analysis and design by testing	50
2.13	Verification by the partial factor method	50
	2.13.1 <i>Partial factors on actions</i>	50
	2.13.2 <i>Partial factors on material properties</i>	51
	2.13.3 <i>Tolerances on geometry</i>	52
	2.13.4 <i>Verification of strength for limit state STR</i>	52
	2.13.5 <i>Verification of stability for limit state EQU</i>	53
2.14	Summary of key points	54
2.15	Worked examples	55
	2.15.1 <i>Shear wall under combined loading</i>	55
	2.15.2 <i>Elevated bridge deck</i>	59
	2.15.3 <i>Concrete cylinder tests</i>	65
2.16	Notes and references	68
3	General rules for geotechnical design	71
3.1	Scope of Eurocode 7 Part 1	71
3.2	Design requirements	73
	3.2.1 <i>Commitment to limit state design</i>	73
	3.2.2 <i>Complexity of design</i>	74
	3.2.3 <i>Geotechnical categories</i>	74
3.3	Limit states	77
3.4	Actions and design situations	78
	3.4.1 <i>Design situations</i>	78
	3.4.2 <i>Geotechnical actions</i>	79
	3.4.3 <i>Distinction between favourable and unfavourable actions</i>	80
	3.4.4 <i>Should water pressures be factored?</i>	82
3.5	Design and construction considerations	85
	3.5.1 <i>Durability</i>	85
	3.5.2 <i>Design considerations relating to construction</i>	85
	3.5.3 <i>Execution</i>	85
3.6	Geotechnical design	86
	3.6.1 <i>Design by calculation</i>	86
	3.6.2 <i>Design by prescriptive measures</i>	88
	3.6.3 <i>Design by testing</i>	88
	3.6.4 <i>Design by observation</i>	89

3.7	Supervision, monitoring, and maintenance	89
3.7.1	<i>Supervision</i>	90
3.7.2	<i>Monitoring</i>	90
3.7.3	<i>Maintenance</i>	92
3.7.4	<i>Practical recommendations</i>	92
3.8	The Geotechnical Design Report	92
3.9	Summary of key points	93
3.10	Notes and references	94
4	Ground investigation and testing	95
4.1	Standards for geotechnical investigation and testing	95
4.1.1	<i>Eurocode 7 Part 2</i>	95
4.1.2	<i>Complementary standards</i>	96
4.2	Planning ground investigations	97
4.2.1	<i>Aims of a geotechnical investigation</i>	97
4.2.2	<i>Spacing of investigation points</i>	99
4.2.3	<i>Depth of investigation points</i>	100
4.3	Identification and classification of soil	101
4.3.1	<i>Soil description</i>	101
4.3.2	<i>Density of coarse soils</i>	102
4.3.3	<i>Consistency and strength of fine soils</i>	103
4.4	Identification and classification of rock	104
4.4.1	<i>Rock description</i>	104
4.4.2	<i>Rock material strength</i>	104
4.4.3	<i>Discontinuities</i>	105
4.4.4	<i>Weathering</i>	105
4.5	Soil and rock sampling	106
4.5.1	<i>Sampling methods</i>	106
4.5.2	<i>Quality classes</i>	106
4.5.3	<i>Applicability of sampling to obtain parameters</i>	106
4.5.4	<i>Minimum testing</i>	108
4.6	Groundwater measurements	109
4.6.1	<i>Groundwater measuring systems covered</i>	109
4.6.2	<i>Planning and execution</i>	109
4.6.3	<i>Applicability of groundwater measurement systems</i>	109
4.7	Field tests in soil and rock	110
4.7.1	<i>Field tests covered</i>	110
4.7.2	<i>Objectives</i>	111
4.7.3	<i>Specific requirements</i>	111
4.7.4	<i>Evaluation of tests results</i>	111
4.7.5	<i>Obtaining derived values from the test results</i>	112
4.7.6	<i>Applicability of field tests to obtain parameters</i>	113
4.8	Laboratory tests in soil and rock	114
4.8.1	<i>Laboratory tests covered</i>	114

4.8.2	<i>Objectives</i>	115
4.8.3	<i>Requirements</i>	115
4.8.4	<i>Evaluation and use of tests results</i>	115
4.8.5	<i>Applicability of laboratory tests to obtain parameters</i>	116
4.9	Testing of geotechnical structures	117
4.10	Summary of key points	117
4.11	Worked examples	117
4.11.1	<i>Specification of field work</i>	117
4.11.2	<i>Borehole log</i>	121
4.11.3	<i>Specification of laboratory tests</i>	123
4.12	Notes and references	125
5	Ground characterization	129
5.1	From test results to design	129
5.2	Deriving geotechnical parameters	129
5.2.1	<i>Overview</i>	129
5.2.2	<i>Correlations</i>	130
5.2.3	<i>Theory</i>	132
5.2.4	<i>Empiricism</i>	133
5.2.5	<i>Direct assessment</i>	134
5.2.6	<i>Symbols</i>	134
5.3	Obtaining the characteristic value	135
5.3.1	<i>Problems applying statistics to geotechnical parameters</i>	135
5.3.2	<i>Cautious estimate</i>	137
5.3.3	<i>Representative values</i>	138
5.3.4	<i>Moderately conservative and worst credible values</i>	138
5.3.5	<i>How much ground is involved?</i>	139
5.3.6	<i>Well-established experience</i>	141
5.3.7	<i>Standard tables of characteristic values</i>	142
5.3.8	<i>Summary of geotechnical characterization</i>	142
5.4	Case studies selecting characteristic values	143
5.4.1	<i>London and Lambeth clays at Holborn</i>	143
5.4.2	<i>Singapore marine clay</i>	146
5.4.3	<i>Thames Gravels at Gravesend</i>	149
5.4.4	<i>Conclusions from the case studies</i>	151
5.5	Statistical methods for ground characterization	151
5.5.1	<i>Normal or log-normal distribution?</i>	151
5.5.2	<i>Calculating the 95% confident mean value</i>	153
5.5.3	<i>Statistics for parameters that vary with depth</i>	155
5.5.4	<i>Dealing with small data sets</i>	156
5.5.5	<i>Use or abuse of statistics?</i>	158
5.6	Summary of key points	158
5.7	Worked examples	159
5.7.1	<i>Standard penetration tests in Thames Gravel</i>	159

5.7.2	<i>Undrained triaxial compression tests on London clay</i>	164
5.7.3	<i>Shear box tests on Leighton Buzzard sand</i>	166
5.8	Notes and references	170
6	Verification of strength	173
6.1	Basis of design	173
6.1.1	<i>Effects of actions</i>	174
6.1.2	<i>Resistance</i>	176
6.2	Introducing reliability into design	177
6.2.1	<i>Actions and effects</i>	179
6.2.2	<i>Material strength and resistance</i>	180
6.2.3	<i>Geometry</i>	182
6.2.4	<i>Verification</i>	182
6.2.5	<i>Partial factors</i>	182
6.3	Design approaches	184
6.3.1	<i>Design Approach 1</i>	186
6.3.2	<i>Design Approach 2</i>	189
6.3.3	<i>Design Approach 3</i>	191
6.3.4	<i>Choice of Design Approach by different European countries</i>	195
6.4	Alternative ways of dealing with design uncertainty	197
6.4.1	<i>Allowable or working stress design (ASD or WSD)</i>	197
6.4.2	<i>Load and strength factor design</i>	197
6.4.3	<i>Load and resistance factor design (LRFD)</i>	198
6.5	Summary of key points	199
6.6	Notes and references	200
7	Verification of stability	201
7.1	Basis of design	201
7.2	Introducing reliability into the design	202
7.2.1	<i>Partial factors</i>	204
7.3	Loss of static equilibrium	206
7.4	Uplift	210
7.5	Hydraulic failure	215
7.5.1	<i>Hydraulic heave</i>	215
7.5.2	<i>Internal erosion</i>	219
7.5.3	<i>Piping</i>	219
7.6	Summary of key points	220
7.7	Worked examples	220
7.7.1	<i>Wind turbine</i>	221
7.7.2	<i>Concrete dam</i>	226
7.7.3	<i>Box caisson</i>	231
7.7.4	<i>Basement subject to uplift</i>	236
7.7.5	<i>Stability of weir against hydraulic failure</i>	244
7.7.6	<i>Piping due to heave (HYD)</i>	247

7.8	Notes and references	251
8	Verification of serviceability	253
8.1	Basis of design	253
	8.1.1 <i>Effects of actions</i>	254
	8.1.2 <i>Limiting serviceability criteria</i>	255
8.2	Introducing reliability into the design	256
8.3	Simplified verification of serviceability	258
8.4	Methods to determine settlement	260
8.5	Summary of key points	261
8.6	Worked examples	261
8.7	Notes and references	261
9	Design of slopes and embankments	263
9.1	Ground investigation for slopes and embankments	263
9.2	Design situations and limit states	264
9.3	Basis of design	265
9.4	Stability of an infinitely long slope	265
	9.4.1 <i>Closed-form solution using global factor of safety</i>	266
	9.4.2 <i>Closed-form solution using partial factors from Eurocode 7</i>	268
	9.4.3 <i>Design charts for infinitely long slopes</i>	271
9.5	Stability of a finite slope (based on method of slices)	272
	9.5.1 <i>Undrained analysis based on total stresses</i>	273
	9.5.2 <i>Eurocode 7 implementation of the Conventional Method</i>	274
	9.5.3 <i>Drained analysis based on effective stresses</i>	274
	9.5.4 <i>Eurocode 7 implementation of Bishop's Routine Method</i>	275
	9.5.5 <i>Design charts for finite slopes</i>	277
9.6	Supervision, monitoring, and maintenance	278
9.7	Summary of key points	278
9.8	Worked examples	279
	9.8.1 <i>Infinite soil slope overlying permeable rock</i>	279
	9.8.2 <i>Infinite soil slope overlying impermeable rock</i>	284
	9.8.3 <i>Road cutting (using design charts)</i>	290
	9.8.4 <i>Road cutting (using slope stability software)</i>	297
	9.8.5 <i>Road embankment over an alluvial flood plain</i>	300
9.9	Notes and references	304
10	Design of footings	305
10.1	Ground investigation for footings	305
10.2	Design situations and limit states	306
10.3	Basis of design	307
10.4	Footings subject to vertical actions	308
	10.4.1 <i>Effects of actions</i>	309
	10.4.2 <i>Eccentric loading and effective foundation area</i>	310

10.4.3	<i>Drained bearing resistance</i>	311
10.4.4	<i>Non-dimensional factors applied to the triple-N formula</i>	312
10.4.5	<i>Undrained bearing resistance</i>	313
10.4.6	<i>Gross or net bearing resistance?</i>	314
10.5	Footings subject to horizontal actions	315
10.5.1	<i>Effects of actions</i>	316
10.5.2	<i>Drained sliding resistance</i>	317
10.5.3	<i>Undrained sliding resistance</i>	320
10.5.4	<i>Passive earth pressure – favourable action or resistance?</i>	320
10.6	Design for serviceability	321
10.7	Structural design	323
10.8	Supervision, monitoring, and maintenance	323
10.9	Summary of key points	324
10.10	Worked examples	324
10.10.1	<i>Pad footing on dry sand</i>	325
10.10.2	<i>Eccentric pad footing on dry sand</i>	331
10.10.3	<i>Strip footing on clay</i>	337
10.10.4	<i>Settlement of strip footing on clay</i>	345
10.11	Notes and references	351
11	Design of gravity walls	353
11.1	Ground investigation for gravity walls	353
11.2	Design situations and limit states	354
11.3	Basis of design	355
11.3.1	<i>Unplanned excavation</i>	356
11.3.2	<i>Selection of water levels</i>	357
11.3.3	<i>Wall friction and adhesion</i>	358
11.3.4	<i>Passive earth pressure – favourable action or resistance?</i>	358
11.4	Reinforced concrete walls	359
11.4.1	<i>Bearing</i>	360
11.4.2	<i>Sliding</i>	361
11.4.3	<i>Toppling</i>	363
11.4.4	<i>Reinforced concrete walls with narrow heels</i>	363
11.5	Mass gravity walls	365
11.5.1	<i>Bearing</i>	367
11.5.2	<i>Sliding</i>	367
11.5.3	<i>Toppling</i>	368
11.6	Reinforced fill structures	368
11.7	Design for serviceability	368
11.8	Structural design	369
11.9	Supervision, monitoring, and maintenance	369
11.10	Summary of key points	370
11.11	Worked examples	370
11.11.1	<i>T-shaped gravity wall retaining dry fill (undrained analysis)</i>	

11.11.2	<i>T-shaped gravity wall retaining dry fill (drained analysis)</i>	377
11.11.3	<i>T-shaped gravity wall retaining wet fill</i>	383
11.11.4	<i>Mass concrete wall retaining dry fill</i>	390
11.12	Notes and references	397
12	Design of embedded walls	399
12.1	Ground investigation for embedded walls	399
12.2	Design situations and limit states	401
12.3	Basis of design	402
12.3.1	<i>Role of CIRIA C580 in UK practice</i>	402
12.3.2	<i>Unplanned excavation</i>	403
12.3.3	<i>Selection of water levels</i>	405
12.3.4	<i>Wall friction and adhesion</i>	405
12.4	Limiting equilibrium methods	407
12.4.1	<i>Fixed-earth conditions</i>	407
12.4.2	<i>Free-earth conditions</i>	408
12.4.3	<i>At-rest values of earth pressure</i>	409
12.4.4	<i>Limiting values of earth pressure</i>	409
12.4.5	<i>Passive earth pressure: resistance or action?</i>	413
12.4.6	<i>Net pressures</i>	416
12.5	Soil-structure interaction analysis	418
12.5.1	<i>Sub-grade reaction models</i>	418
12.5.2	<i>Numerical methods</i>	421
12.6	Design for serviceability	422
12.7	Structural design	424
12.8	Supervision, monitoring, and maintenance	424
12.9	Summary of key points	424
12.10	Worked examples	425
12.10.1	<i>Cantilever embedded wall</i>	425
12.10.2	<i>Anchored sheet pile wall</i>	432
12.11	Notes and references	440
13	Design of piles	443
13.1	Ground investigation for piles	443
13.2	Design situations and limit states	444
13.3	Basis of design	445
13.3.1	<i>Design by static load tests</i>	446
13.3.2	<i>Design by calculation</i>	448
13.3.3	<i>Design using dynamic load tests</i>	448
13.3.4	<i>Design using pile driving formulae or wave equation analysis</i>	448
13.4	Piles subject to compression	449
13.4.1	<i>Downdrag</i>	450

13.5	Piles subject to tension	452
13.6	Piles subject to transverse actions	454
13.7	Introducing reliability into the design of piles	454
	13.7.1 <i>Partial factors</i>	456
	13.7.2 <i>Design Approach 1</i>	457
	13.7.3 <i>Design Approach 2</i>	460
	13.7.4 <i>Design Approach 3</i>	462
13.8	Design by calculation	464
13.9	Design by testing	465
	13.9.1 <i>Correlation factors</i>	465
13.10	Traditional design	468
13.11	Changes made in the UK National Annex	470
	13.11.1 <i>Changes to resistance factors</i>	470
	13.11.2 <i>Changes to correlation factors</i>	472
13.12	Supervision, monitoring, and maintenance	474
13.13	Summary of key points	475
13.14	Worked examples	475
	13.14.1 <i>Concrete pile driven into clay and sand</i>	475
	13.14.2 <i>Concrete pile from Example 13.1 to UK National Annex</i>	484
	13.14.3 <i>Static load tests for the Emirates Stadium in London</i>	488
	13.14.4 <i>Design of continuous flight auger piles from cone tests</i>	494
	13.14.5 <i>Designing to a set with a pile driving formula</i>	501
13.15	Notes and references	507
14	Design of anchorages	509
14.1	Ground investigation for anchorages	510
14.2	Design situations and limit states	510
14.3	Basis of design	510
14.4	Anchorage tests	513
	14.4.1 <i>Investigation tests</i>	513
	14.4.2 <i>Suitability tests</i>	515
	14.4.3 <i>Acceptance tests</i>	516
14.5	Pull-out resistance from tests	517
	14.5.1 <i>Characteristic pull-out resistance</i>	517
	14.5.2 <i>Design pull-out resistance</i>	518
14.6	Pull-out resistance by calculation	520
14.7	Summary of key points	520
14.8	Worked example	520
	14.8.1 <i>Grouted anchors supporting an embedded retaining wall</i>	521
14.9	Notes and references	526
15	Execution of geotechnical works	529
15.1	The work of CEN TC 288	529
15.2	Piles	530

15.2.1	<i>Bored piles</i>	530
15.2.2	<i>Displacement piles</i>	532
15.2.3	<i>Micropiles</i>	535
15.3	Walls and steep slopes	537
15.3.1	<i>Sheet pile walls</i>	537
15.3.2	<i>Diaphragm walls</i>	539
15.3.3	<i>Ground anchors</i>	539
15.3.4	<i>Reinforced fill</i>	543
15.3.5	<i>Soil nailing</i>	545
15.4	Ground improvement	545
15.4.1	<i>Grouting</i>	545
15.4.2	<i>Jet grouting</i>	547
15.4.3	<i>Deep mixing</i>	549
15.4.4	<i>Deep vibration</i>	549
15.4.5	<i>Vertical drainage</i>	551
15.5	Future developments	554
15.6	Summary of key points	554
15.7	Notes and references	555
16	Geotechnical reports	557
16.1	Introduction	557
16.2	Geotechnical investigation and testing reports	558
16.2.1	<i>Drilling and sampling reports</i>	558
16.2.2	<i>Field investigation reports</i>	558
16.2.3	<i>Laboratory test reports</i>	560
16.3	Ground Investigation Report	561
16.3.1	<i>Presentation</i>	561
16.3.2	<i>Evaluation</i>	562
16.3.3	<i>Derived values</i>	563
16.4	Geotechnical Design Report	563
16.5	Comparison with existing practice	565
